

FLAGSTAND XL

The FlagStand XL comes in two versions – one with weighted plates and one where you use water filled bags as weights. You cannot use the water bags on the foot designed for the weighted plates.

The weighted plates attach to the base in one simple step. For more stability, use the fillable water bags. These bags attach to the frame, provide a more stable base and are easier to transport.

The FlagStand XL is a stable, portable flag stand with a telescopic function, making it possible to vary the height up to 18' (5.5 m). The simple construction, with very few loose parts, allows simple transportation and makes the product fast to mount and set up. The FlagStand XL comes in two versions – one with weighted plates and one where you use bags filled with water as weights.

Key Features:

- Very few loose parts – fits into one bag
- Very fast to mount and set up
- Base with water bags or base with cast iron weights
- Telescopic flag pole that reaches up to 18' (5.5 m)
- Carefully selected materials to endure long outdoor use
